Hello,

I am excited to see your open position, and I hope to be invited for an interview.

I am a detail-oriented software engineer focused on building beautiful and functional user experiences. I have been programming for approximately eight years now, and I strive to consistently grow and improve my abilities. I currently work for Telos Corporation as a software engineer and for Public Bloc as a technical advisor.

During my time spent with Telos, I have led a team of two other software engineers in creating an enterprise-grade blockchain solution. We have built our software on top of Hyperledger Composer, and I have taken care of designing the entire front-end of our platform using Github's Electron. This is my first professional position and my first time leading a team of developers.

I have also spent the past few years working on web development, gradually teaching myself basic design principles. My current website can be found through my resume and the rest of my portfolio can also be found within. I have also worked on websites and web applications for hackathons, university organisations, and people looking to bring their product to market. I traditionally use Google's Firebase to handle my web hosting/database, as demonstrated in my website for Mason Some Noise, an organisation at my university.

I know that my years of experience, along with my eye for aesthetically pleasing user experiences and clean, well-documented code, can be a great addition to your company, and I hope that my work can speak for itself in that regard.

Thank you for your time; I look forward to learning more about this opportunity!

Sincerely,

Isaac Sheikh
